Group 11 – The Accelerators

Problem Statement

Many fast-food cafés are located too far for people to normally walk to buy food in local townships. Therefore, it makes it difficult for local residents to buy their desired food, as they are too reluctant to walk to the café. Due to increased crime rate in townships, customers are afraid to walk to café to buy food after hours, and for someone who is not familiar with the area, finds it hard to get the nearest café, and this creates a loss for the business owners.

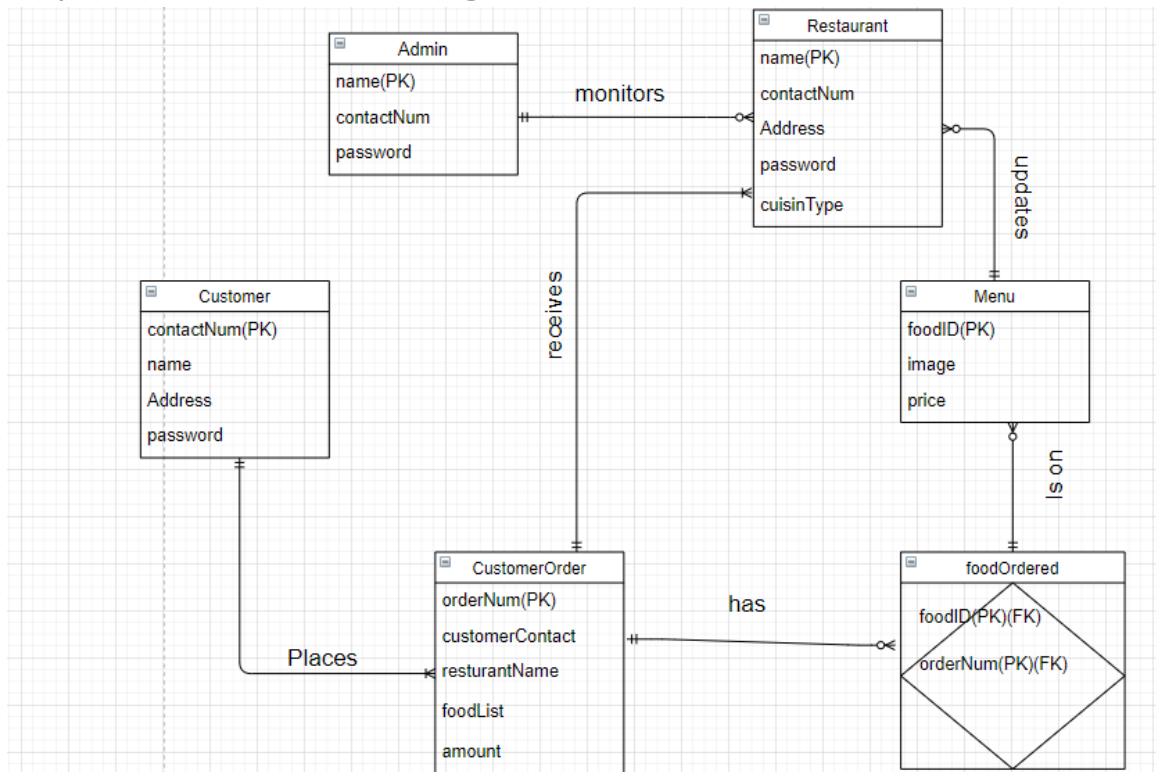

Goal

The goal is to create an online market for all locals' restaurants to sell their food online and to growth their target market and ultimately create jobs. And to get as many restaurants as we can for people to get different types of food.

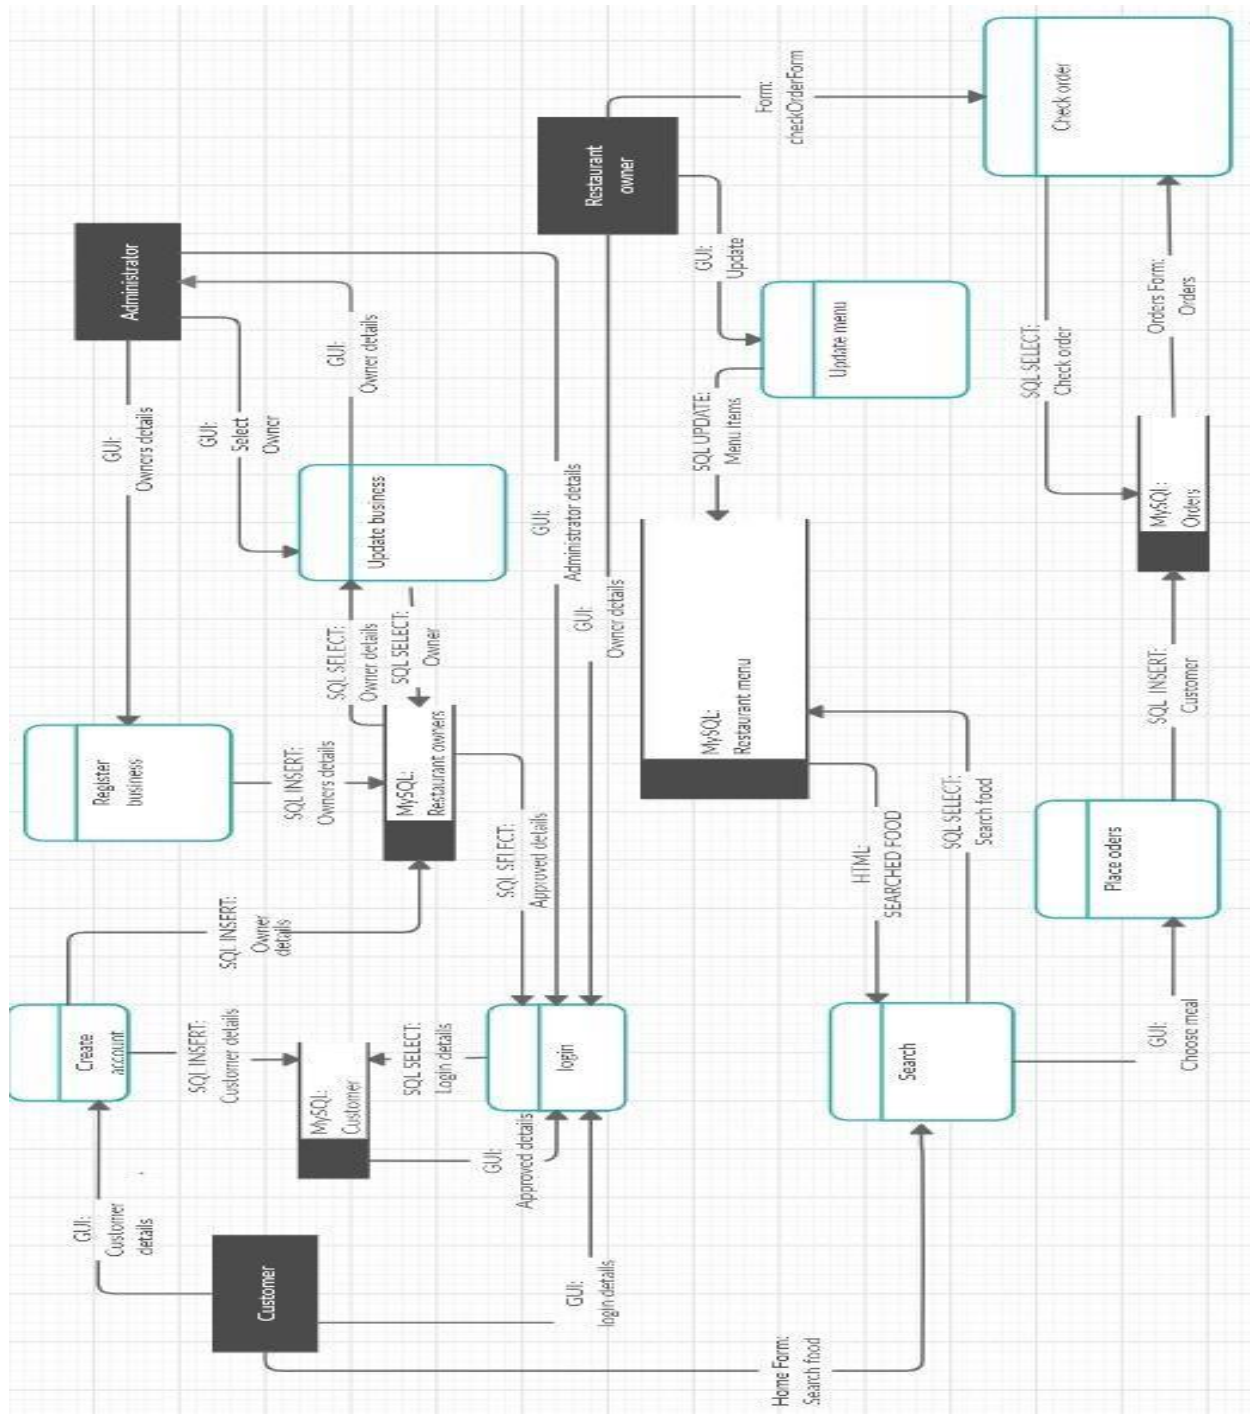

Mission

The Accelerators are proposing an online food ordering system called EasyFood. EasyFood will provide an online system to handle ordering and delivering of food to local households. Customer will be able to order food at comfort of their homes and business owners will be able to handle orders easily through the system. The system will provide great opportunity for local cafes to get exposure for their business and create safety for customers after late hours.
